

Systems we delivered **over a decade ago** are still in daily production use.

WHAT WE OFFER

We build mobile and web software under your brand. You keep the client and the project, we deliver the code. A senior-led two-person team, no account-manager layers: you brief the people who build.

STACK

Mobile React Native + Expo, TypeScript. One codebase, Android and iOS.

Backend PHP (Laravel) or Python, REST APIs.

Data PostgreSQL / MySQL on the server, SQLite on device for offline-first.

Web React front-ends and SaaS dashboards.

Integrations Payments and subscriptions (Stripe, RevenueCat), accounting (QuickBooks, Xero), banking and public-rate APIs.

Delivery EAS Build to App Store and TestFlight, Gradle to Google Play, hosting and maintenance.

Legacy PHP maintenance and modernization (Yii2, older Laravel): the work agencies would rather hand off than staff.

WHAT WE SPECIALIZE IN

Offline-first is our core: apps that keep working with no connection. Local-first data, background sync when the network returns, and conflict resolution when two devices edit the same record. We know the domains where this actually matters: **invoicing, inventory and barcode, documents and scanning, and field-service crews with proof of work.**

What we don't do: design from scratch, marketing, or native-only iOS / Android builds. We say no to what is not ours, so what we take on ships.

PROOF

- A European printing group needed to stop retyping orders from email → we built quoting calculators (2011), an order-management CRM (2016) and a B2B self-service portal → **15-20 orders a day still run through it, in daily use for 15 years.** *Public reference available.*
- Polish sole traders needed compliant foreign-exchange reports → we built a SaaS that pulls official central-bank rates and computes FIFO rate differences → **a live product with paying subscribers (fxdiff.pl).**
- **Our own products** → an offline-first app suite we designed, shipped and maintain: invoicing, document scanning, inventory, field service, a field CRM → **live on Google Play and the App Store.**

COMMERCIAL TERMS

RATE

€45-65 / hour by scope and urgency. Fixed price for a defined scope.

AVAILABILITY

Current capacity and next start date confirmed on request.

CODE OWNERSHIP

Full rights transfer to you on payment.

ENGAGEMENT

Typical project €8,000-40,000. Trial task - happy to start small.

WHITE-LABEL

Under NDA, delivered under your brand, no direct contact with your client.

BILLING

EU invoice from Portugal. Reverse charge for EU B2B. VAT ID provided with the contract.

HOW WE WORK

Spec approved before we write code. Regular demos, so you see progress, not just a final result. Handover with documentation and post-launch support. Written-first and async-friendly: clear specs, estimates and progress updates in writing, across time zones.

Send us a brief. You get an estimate within two working days.

Not "get in touch" - a real scope and price to take back to your client.
